Progress Report

Life-Saving Water

Budget \$51,800

Project Timeline

\$11,125 TO GO

SEP 22

AUG 23

Overview

Our partners in Bali have been helping poor villages access clean water and health care for over ten years. Some villages have no ready access to clean water, relying only on unhealthy rice field run-off that disappears in the dry season. Other villages may have water available but no system for sharing it evenly among families. This project will partner with five villages in Bali where distance and finance are the biggest barriers to accessing clean water. Training in how to maintain the infrastructure is also a component of the project so that it will be viable for years to come.

Impact for September 2022 to March 2023

Building 45 water source storage facilities

A great start to this project with 15 water tanks built, impacting 49 families, across 4 different locations. The remaining tanks to build are in closer proximity and expected to be completed on target.

Training in construction & maintenance

Villagers are involved in the construction of the tanks and are well trained in how to maintain them. Our partner is then available for consultation but encourages villagers to take responsibility for their water systems.

165

Piping water to homes of 165 families

Once all the tanks are built, 165 families across Bali, totalling 766 people, will have access to clean water. The community contributes labor for building tanks and laying pipes, as well as food and drinks for all the workers.

Increased fish farming, livestock & crop variety

A flow-on benefit of readily available clean water is improved capacity for farming and agriculture, which in turn leads to better health and nutrition, increased income, and more education opportunities for children.

Komang Supartini's Story

Komang Supartini's family life has been transformed by a new water tank close to home. For years, our partner has been helping Komang Supartini in her physical rehabilitation after being electrocuted. It has been a slow recovery but she is making good progress. A major challenge the family faced was getting enough clean water for bathing, cooking and cleaning. With only a 50 litre bucket in reserve, her mother and brother would cart water little by little from 200 metres away or ask neighbours for their water. Now they have a 5,000L tank and pipes to the bathroom and kitchen provide running water. What a difference it has made!
