### EDUCATION

Mean years of school (adults) 8.6 years

### HUMAN DEVELOPMENT INDEX\*

Ranking out of 191 nations Indonesia 114 (Aust 5)

\*2021-22 Human Development Report

### Overview

The Sasak people of Lombok are among the poorest people groups in Indonesia. Our partner works with them to improve access to basic life necessities through multiple community-based projects, including water projects, educational programs and engaging people with disabilities. The mobility team helps underprivileged people living with disabilities. 200 new families and 350 existing families are expected to receive education/follow-up education in caring for loved ones with disabilities. Free therapeutic aids such as wheelchairs, crutches etc and physiotherapy equipment will be provided as required. The budget for Year 2 is \$21,000.

### Why support this:

Our partner has been operating since 2013, successfully implementing similar types of projects. This project has a strong emphasis on providing on-the-job training for local specialists to deepen their understanding and transfer knowledge so that the work can become sustainable. Local partners also help navigate the cultural challenges associated with community development work in rural village settings. The project relies heavily on the communities themselves taking part and working alongside our partners to give them a sense of accomplishment and empowerment, something which is vital to the local ownership of the projects.

### Objectives Include:

Visit and assist people living with a disability

Capacity building and training for team members

Regular disability therapeutic sessions

Provide education for families with a disability

### Expected life Change

- Families will have the resources and training to care for loved ones with disabilities
- Those with disabilities will enjoy a better quality of life as their families are more able to give them the love and care they need
- Better health/nutrition brings greater productivity in other areas of life
