Overview

This project is dedicated to transforming the educational environment and well-being of approximately 600 learners and 25 staff members across two vital, community-initiated schools. These schools serve children who are especially vulnerable to the challenges of inadequate Water, Sanitation, and Hygiene (WASH) infrastructure.

In partnership with local communities, the project is improving health, education, and economic outcomes by addressing critical water and sanitation needs. Activities include constructing toilets and wash stations, distributing water filters, and delivering practical hygiene training. Year 1 budget: \$56,000

Why support this:

Across the two target communities, lack of safe drinking water remains a major challenge, impacting health, productivity, financial stability, and education. This program addresses both immediate needs and long-term solutions.

Our partner works with local communities to provide water infrastructure and training in sanitation, hygiene, and water management. Community members are equipped to manage and maintain the project sustainably. Strengthening local knowledge also empowers the next generation to develop lasting water and sanitation solutions, helping communities achieve long-term change.

Objectives Include:

**School WASH
education in the
2 rural schools**

**Construct toilet
blocks with septic
systems**

**Claypot water filters
providing clean
drinking water**

**Hygiene & sanitation
training for all
beneficiaries**

Expected life Change

- Significant reduction in illness, particularly from water-borne diseases.
- Improved children's school attendance as a result of better health and increased family productivity.
- Up to a 50% reduction in time spent collecting water, enabling greater participation in education, income-generating activities, and other quality-of-life improvements.
